CODE EXPLANATION:

Creating a database for school

1. Create a database for school data.

2. In that database create 3 tables.

3. Table1 contains the data of students in the school.

4. Table2 contains the data of classes.

5. Table3 contains the data of subjects.

6. Then add some data into the tables with the help of INSERT command in the SQL.

7. Then push the Code to the Git with the help of git commands.
